ABOUT ME

I am Mustafa Haj from Aleppo in Syria, I have 22 years old,
Passionate to learn and develop myself day by day,
My dream is to be one of the best programmers, I never had an academic education, but I did many vocational training courses,
But I continued and persevered in self-learn after that until I began to have experience and a good understanding of all the basics of web design and development, e-marketing, and graphic design,
I like working with a cooperative team with a pleasant nature and a friendly atmosphere. Working within a team increases the experience, strength, speed, and quality of the software and design due to the multiplicity of opinions, ideas, and tastes,
As for my work independently, I like to take it as a challenge to my personal skills and experiences in my field, to help me discover points Double and compensate
